## The Case for a Named Worker

I receive personalised and inclusive support, where the people who care for me know me as an individual, and recognise me as having unique strengths and aspirations, and know that my background, values and requirements are unique to me.

I experience a seamless care journey, where health and care services are joined up around me and I only have to tell my story once.

I receive care and support that is co-ordinated, and everyone works well together and with me to plan my care, bringing together services to achieve the outcomes that are important to me

## Case for a named worker

- trusted relationships with people supported by services and those around them
- increased and meaningful opportunities for people to shape their plans that respond to individual communication needs and preferences
- new packages of support that better meet their strengths, aspirations and needs
- high levels of satisfaction reported including that people felt that the named social worker listened to them and acted on their behalf
- evidence that people have been better able to live the lives they want including faster and smoother discharges
- evidence of reduced costs for packages of care
- meaning that every £1 invested would anticipate a saving or costs avoided of £5.14.

Named Social Worker

## Barriers

- Where it does exist, named worker model restricted to learning disabilities and mental health – how do we extend beyond?
- How do we develop the skills, confidence and leadership capabilities of named workers – big step from care management?
- High levels of concern amongst staff about workload?
- How do you manage sickness, absence and lack of staffing in teams?
- Practice over time becomes task driven and case management in approach

WORKERS 1,899 to go...

# Analysis + Understanding

- Gathering case load data for long term and review teams
- Considering case numbers and reviewed against Better Lives Strategy outcomes for residents and improving practice
- Considering people placed out of county
- Understanding capacity of workforce to work as a named worker
- Considering how phasing could best support roll out
- Segmenting data to establish number of people we support in different settings

# Modelling + Planning

- Implementation is informed by understanding of experiences people in receipt of care and support and carers; managers and staff
- Driven by offering named workers to people regardless of support needs i.e. roll out is not just for people with a specific need e.g. LD or MH
- Implementation is informed by the analysis of case data and principles of prevent, reduce and delay
- Implementation approach addresses workforce challenges by phasing delivering starting with people living at home and/or in Extra Care
- So, what does this look like?.....
